# NOSE SURGERY CASE STUDIES

RHINOPLASTY CAN CORRECT ABNORMALITIES OF THE NOSE – BOTH SUBTLE AND SIGNIFICANT. HERE SYDNEY PLASTIC SURGEON **DR MICHAEL MIROSHNIK** SHOWCASES TWO SUCH EXAMPLES. AIMÉE SURTENICH REPORTS.

## Case study 1

BEFORE

This 28-year-old male requested a change in profile as he felt his nose was too overpowering for his face in profile view. Dr Miroshnik performed an open rhinoseptoplasty to remove his dorsal nasal hump, improve his nasal tip and minimise the amount of nostril show while still retaining a masculine-looking nose.

AFTER rhinoseptoplasty by Dr Miroshnik

## Case study 2

BEFORE

This patient was concerned with the frontal view of her nose. She felt it looked too wide and bulky for her face shape and underwent open rhinoseptoplasty by Dr Miroshnik to make her nose more symmetrical and 'softer'. Her nasal tip was also refined to create a more balanced appearance. 'A successful rhinoplasty often comes down to a matter of millimetres,' says Dr Miroshnik. 'I believe this can be the difference between an average and an excellent result.'
